COMPANY PROFILE

At Aladdin, we blend cutting-edge science with relentless progress. Established in 2009, we're renowned for our superior reagents, ranging from chemicals and biochemicals to proteins and antibodies. With over 700 employees across global offices in the US, Germany, Ireland, Singapore, and China, and powered by three manufacturing facilities and two R&D Centers, our commitment to scientific excellence and product quality is unwavering.

Our Vision

Aladdin is a beacon in the technological and innovative landscape, symbolizing a future driven by scientific discovery. We believe in the transformative power of science — its ability to change societies and elevate lives. Our ethos is embodied in every product we create and every service we offer.

Precision-Driven Research

In the realm of research and development, precision is paramount. Our life science tools are designed for unmatched accuracy, ensuring research that's not only efficient but also exceptionally precise. Our goal is clear and steadfast: to deliver precision-guided results and build trust through superior outcomes.

Innovation at Our Core

Innovation is the heart of Aladdin's journey. It propels us into new frontiers, constantly pushing us to transcend the ordinary. We harness data's vast potential, breaking traditional boundaries and pioneering innovations that truly enhance life. Join us on this transformative journey, where each step we take is towards a more innovative, brighter future.

Chemistry & Biochemicals

Welcome to the "Chemistry and Biochemistry" section! Here, you'll discover a comprehensive collection of high-quality chemicals and biochemicals for various scientific applications. From organic synthesis to life science research, our extensive catalog offers a wide range of compounds and reagents to support your laboratory needs. Explore our diverse selection, including organic molecules, biochemicals, solvents, and analytical standards, among others. Whether you're conducting research in chemistry, biology, or pharmaceuticals, our products are designed to meet the highest quality standards and ensure reliable results. Let us be your trusted partner in scientific discovery and innovation!

Materials Science

Welcome to our Materials Science category, where innovation and quality converge. Our extensive selection of materials is crafted to meet the highest standards of performance and reliability, catering to diverse research and industrial applications. From advanced polymers to cutting-edge nanomaterials, our products are designed to support your work in areas such as electronics, energy, and structural materials. We ensure rigorous quality control and thorough testing to provide you with materials that excel in durability, efficiency, and precision. Explore our offerings to find the ideal solutions for your materials science projects.

Bioactive Small Molecules

Welcome to our Ligands and Bioactive Small Molecules section, meticulously crafted for the dynamic realm of scientific services and research and development (R&D) in chemistry and life sciences. Explore our comprehensive collection of high-quality ligands and small molecules meticulously engineered to drive innovation and propel advancements across various industries. From receptor agonists and antagonists to enzyme inhibitors and modulators, our selection serves as the foundation for cutting-edge projects in drug discovery, chemical biology, and molecular pharmacology. Whether you're elucidating biological pathways, screening for potential therapeutics, or probing protein-ligand interactions, our Ligands and Bioactive Small Molecules offer versatility, reliability, and precision for your scientific services and R&D endeavors.

Proteins

We offer a diverse range of proteins meticulously designed for research and development (R&D) purposes. Our curated collection includes recombinant proteins, native proteins, and protein complexes, each meticulously characterized and validated for purity, activity, and functionality. These proteins serve as essential tools for studying protein-protein interactions, enzymatic activities, signaling pathways, and other biological processes. Whether investigating protein function, protein structure, or protein-ligand interactions, our high-quality proteins provide researchers with reliable tools to advance their scientific discoveries and drive innovation in fields such as molecular biology, biochemistry, pharmacology, and drug discovery.

Antibodies

Welcome to our Antibodies category, where quality meets precision. Our diverse range of antibodies is meticulously developed to ensure high specificity, exceptional sensitivity, and reliable performance in your research applications. Whether you're conducting immunohistochemistry, flow cytometry, or Western blotting, our antibodies are designed to deliver consistent and reproducible results. We prioritize rigorous validation and thorough testing to meet the exacting standards of the scientific community. Explore our collection to find the perfect antibody for your research needs, backed by our commitment to advancing science with excellence.
