|--------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-----------|
| E598321      | Enhanced NK cell serum-free medium         | [Core Parameter] Serum-free formula for immune cells, no additional serum                                                                                                         | Cell culture grade                                                 | 500mL     |
| E778171      | Exosome-Specific Serum-Free Culture Medium | [Core Parameter] Serum-free formula for exosome isolation, no endogenous exosomes                                                                                                 | Cell culture grade                                                 | 500mL     |
| S1074216     | Hybridoma Serum-Free Medium                | [Core Parameter] Serum-free formula for hybridoma/ MAb production<br>Contains: D-glucose, L-Glutamine, Phenol red, Sodium bicarbonate<br>Does not contain: Serum                  | Cell culture grade                                                 | 500mL     |
| C778399      | CHO Serum-Free Medium (with Glutamax)      | [Core Parameter] Serum-free formula for CHO protein expression<br>Contains: Glutamax<br>Does not contain: Serum                                                                   | Cell culture grade                                                 | 500mL     |
| I778236      | SF-900 SFM                                 | [Core Parameter] Serum-free formula for insect cells<br>Contains: L-Glutamine, Sodium bicarbonate, D-glucose<br>Does not contain: Phenol red<br>For: Sf9 etc. insect cell culture | Sterile filtered, BioReagent, cell culture grade, for insect cells | 500mL     |

|--------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| M485434      | MEM Vitamin Solution (100×)                     | [Core Use] Media supplement vitamin additive, 100× concentrate<br>Solvent: 0.85% NaCl solution, pH 5.4-7.7 | Sterile filtered, BioReagent, cell culture grade                                                                                                              | 100mL                  |
| M476171      | MEM Amino Acids (50x) solution                  | [Core Use] Media supplement amino acid additive, 50× concentrate<br>Does not contain: L-Glutamine          | Sterile filtered, BioReagent, cell culture grade, liquid                                                                                                      | 100mL                  |
| M476170      | MEM Non-essential Amino Acid Solution (100×)    | [Core Use] Media supplement NEAA additive, 100× concentrate<br>Does not contain: L-Glutamine               | Sterile filtered, BioReagent, cell culture grade, liquid                                                                                                      | 100mL                  |
| H598326      | Human MSC serum-free medium additive            | [Core Use] Media supplement for human MSC serum-free media                                                 | Cell culture grade                                                                                                                                            | 100mL                  |
| H777561      | Hybridoma Serum-Free Medium Supplement          | [Core Use] Special supplement for hybridoma serum-free media                                               | Cell culture grade                                                                                                                                            | 100mL                  |
| S767924      | O27 Supplement                                  | [Core Use] General supplement for serum-free media                                                         | Cell culture grade                                                                                                                                            | 100mL                  |
| S767925      | O27 Supplement (Minus Vitamin A)                | [Core Use] General supplement for serum-free media<br>Does not contain: Vitamin A                          | Cell culture grade                                                                                                                                            | 100mL                  |
| L475488      | Penicillin-Streptomycin-Glutamine (100×)        | -                                                                                                          | BioReagent, for cell culture, sterile, 100×                                                                                                                   | 100ml                  |
| L485931      | L-Glutamine-Penicillin-Streptomycin solution    | -                                                                                                          | 100× in 0.9% NaCl, 10000 units penicillin, 10mg streptomycin per mL, 200mM L-Glutamine, 0.1µm sterile filtered, biological reagent, suitable for cell culture | 100ml                  |
| P301861      | Penicillin-Streptomycin Solution                | -                                                                                                          | 100×, sterile                                                                                                                                                 | 100ml                  |
| P478430      | Penicillin-Streptomycin                         | -                                                                                                          | BioReagent, for cell culture, 0.1µm filtered, stabilized solution, 10,000 units penicillin & 10mg streptomycin per mL                                         | 20ml                   |
| P485928      | Penicillin-Streptomycin                         | -                                                                                                          | 100× in 0.9% NaCl, 10000 units penicillin & 10mg streptomycin per mL, 0.1µm sterile filtered, biological reagent, for cell culture                            | 50ml; 100ml; 20×100ml; |
| P578919      | Penicillin-Streptomycin-Amphotericin B Solution | -                                                                                                          | 100X                                                                                                                                                          | 100ml                  |
| G640162      | L-Glutamine                                     | -                                                                                                          | Moligand™, animal-origin free, low endotoxin, for cell culture, ≥ 99%                                                                                         | 5g;25g; 100g;500g      |
| L1196599     | L-Glutamine (100×)                              | -                                                                                                          | BioReagent, for cell culture, sterile, ready-to-use, 100×                                                                                                     | 100ml                  |
| L432948      | L-Glutamine                                     | -                                                                                                          | Moligand™, animal-origin free, USP grade, for cell culture, ≥ 99%                                                                                             | 25g;100g; 500g;1kg     |

|--------------|-------------------------------------|-------------------|--------------------------------------------------------------------------------|---------------------------|
| S1199134     | Sodium Pyruvate (100 mM)            | -                 | Sterile filtered, BioReagent, ready-to-use, for cell culture, 100 mM           | 100ml                     |
| S755694      | Sodium pyruvate                     | -                 | BioReagent, tested for embryonic cell culture, powder                          | 5g                        |
| H100306      | HEPES sodium salt(HEPES-Na)         | -                 | For cell culture, ≥ 99.5%(T)                                                   | 25g;100g;500g             |
| H657463      | HEPES                               | -                 | Animal-origin free, low endotoxin, for cell culture, ≥ 99.5%                   | 25g;100g;500g             |
| H774625      | HEPES                               | -                 | Animal-origin free, for cell culture, ≥ 99.5%, Low endotoxin grade             | 25g;100g;500g             |
| M301574      | 2-Mercaptoethanol                   | -                 | For cell culture, suitable for electrophoresis, molecular biology grade, ≥ 99% | 25ml;100ml;250ml; 1L;2.5L |
| I1447866     | Insulin-Transferrin-Selenium, 100X  | -                 | -                                                                              | 10ml                      |
| L485560      | Lipid Mixture (1000×)               | -                 | BioReagent, for insect cell culture, liquid, sterile-filtered                  | 5ml;25ml                  |
| L485563      | Lipid Mixture 1, Chemically Defined | -                 | BioReagent, for cell culture, liquid, sterile-filtered                         | 5ml;25ml                  |

## [Serum Products]

| Product Code | Product Name                  | Formulation Notes | Specification/ Grade                                                                     | Pack Size        |
|--------------|-------------------------------|-------------------|------------------------------------------------------------------------------------------|------------------|
| R501133      | Rat Serum                     | -                 | BioReagent, sterile, >55 mg protein/mL, 0.22 µm filtered                                 | 10ml;100ml       |
| M501327      | Mouse Serum                   | -                 | BioReagent, sterile, ≥ 30.0 mg/mL, 0.22 µm filtered                                      | 10ml;100ml       |
| B774385      | Adult Bovine Serum            | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| S774364      | Sheep Serum                   | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| G501306      | Guinea Pig Serum              | -                 | Sterile filtered, BioReagent                                                             | 10ml;100ml;500ml |
| C774393      | Chicken Serum                 | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| F774409      | Fish serum                    | -                 | BioReagent, sterile                                                                      | 50ml             |
| R774362      | Rabbit Serum                  | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| D774398      | Donkey Serum                  | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| H774397      | Horse Serum                   | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| C774387      | Calf serum                    | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| C774383      | Feline Serum                  | -                 | BioReagent, sterile                                                                      | 5ml;50ml         |
| P774377      | Porcine serum                 | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| N774391      | Newborn Calf Serum            | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| N774363      | New Zealand Rabbit Serum      | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| R774407      | Rhesus monkey serum           | -                 | BioReagent, sterile                                                                      | 1ml;10ml         |
| G752123      | Goat Serum                    | -                 | -                                                                                        | 50ml;500ml       |
| B774403      | Beagle Dog Serum              | -                 | BioReagent, sterile                                                                      | 10ml;100ml       |
| I774372      | ICR(CD-1) Mouse Serum         | -                 | BioReagent, sterile                                                                      | 5ml;50ml;100ml   |
| C774405      | Cynomolgus Monkey Serum       | -                 | BioReagent, sterile                                                                      | 1ml;5ml;10ml     |
| C774389      | Calf Serum (For cell culture) | -                 | BioReagent, endotoxin tested, mycoplasma-free, for nucleic acid electrophoresis, sterile | 10ml;100ml;500ml |
| C774369      | C57BL/6J Mouse Serum          | -                 | BioReagent, sterile                                                                      | 5ml;50ml;100ml   |
| B774382      | Bama Miniature Pig Serum      | -                 | BioReagent, sterile                                                                      | 10ml;100ml;500ml |
| I1371685     | Horse Serum                   | -                 | BioReagent, sterile                                                                      | 100ml;500ml      |
| I1371678     | Calf Serum                    | -                 | BioReagent, sterile                                                                      | 100ml            |
| E778169      | Exosome-Free FBS              | -                 | Sterile, BioReagent, for cell culture                                                    | 50ml;100ml       |

| <b>DMEM Series</b>      |                       |                                                                                                                                                        |                                                                             |           |
| D1372044                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: L-Glutamine, Phenol red<br>Does not contain: Sodium pyruvate, HEPES                     | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372045                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: Glutamax, Phenol red<br>Does not contain: L-Glutamine, Sodium pyruvate, HEPES           | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| D1372046                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: Glutamax, Sodium pyruvate, Phenol red<br>Does not contain: HEPES                        | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372047                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: L-Glutamine, HEPES, Phenol red<br>Does not contain: Sodium pyruvate                     | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| D1372049                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: L-Glutamine, HEPES<br>Does not contain: Phenol red, Sodium pyruvate                     | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372050                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: Sodium pyruvate<br>Does not contain: L-Glutamine                                        | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| D1372052                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: Phenol red, Sodium bicarbonate<br>Does not contain: L-Glutamine, Sodium pyruvate, HEPES | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372053                | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: Phenol red, Sodium bicarbonate<br>Does not contain: L-Glutamine, Sodium pyruvate, HEPES | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D755878                 | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L, liquid<br>Contains: Glutamax, Sodium pyruvate, Sodium bicarbonate<br>Does not contain: None         | Sterile filtered, cell culture grade                                        | 500mL     |
| D755880                 | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L, liquid<br>Contains: Glutamax, Sodium bicarbonate<br>Does not contain: Sodium pyruvate               | Sterile filtered, cell culture grade                                        | 500mL     |
| D778407                 | DMEM, High Glucose    | [Core Parameter] High glucose, D-glucose 4500mg/L<br>Contains: L-Glutamine, Sodium pyruvate, Phenol red<br>Does not contain: HEPES                     | Sterile filtered, BioReagent, cell culture grade                            | 500mL     |
| D1372055                | DMEM, Low Glucose     | [Core Parameter] Low glucose, D-glucose 1000mg/L<br>Contains: L-Glutamine, Sodium pyruvate, HEPES, Phenol red<br>Does not contain: None                | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372060                | DMEM, Low Glucose     | [Core Parameter] Low glucose, D-glucose 1000mg/L<br>Contains: Glutamax, Sodium pyruvate, Phenol red<br>Does not contain: L-Glutamine, HEPES            | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| D1372065                | DMEM, without Glucose | [Core Parameter] Glucose-free, D-glucose 0mg/L<br>Contains: L-Glutamine, Phenol red<br>Does not contain: D-glucose, Sodium pyruvate, HEPES             | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| <b>DMEM/F-12 Series</b> |                       |                                                                                                                                                        |                                                                             |           |
| A1372075                | Advanced DMEM/ F-12   | [Core Parameter] 1:1 mixed basal system<br>Contains: D-glucose, NEAA, Sodium pyruvate, Phenol red<br>Does not contain: L-Glutamine, HEPES              | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |

|-------------------------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|-----------|
| D1370038                | DMEM/F-12 (with Penicillin-Streptomycin) | [Core Parameter] 1:1 mixed basal system, D-glucose 3151mg/L<br>Contains: L-Glutamine, HEPES, Pen-Strep, Phenol red, Sodium bicarbonate<br>Does not contain: None                         | Sterile filtered, BioReagent, cell culture grade, 1 ×                       | 500mL     |
| D1372074                | DMEM/F-12 Medium                         | [Core Parameter] 1:1 mixed basal system<br>Contains: D-glucose, L-Glutamine, Sodium pyruvate<br>Does not contain: Phenol red, HEPES                                                      | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372080                | DMEM/F-12 Medium                         | [Core Parameter] 1:1 mixed basal system<br>Contains: D-glucose, L-Glutamine, Sodium pyruvate, Phenol red<br>Does not contain: HEPES                                                      | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| D778392                 | DMEM/F-12 (1:1)                          | [Core Parameter] 1:1 mixed basal system<br>Contains: D-glucose, L-Glutamine, Sodium pyruvate, HEPES, Phenol red<br>Does not contain: None                                                | Sterile filtered, BioReagent, cell culture grade, sterile                   | 500mL     |
| D755872                 | DMEM/Nutrient Mixture F-12 Ham           | [Core Parameter] 1:1 mixed basal system, powder<br>Contains: 15mM HEPES<br>Does not contain: L-Glutamine, key amino acids, CaCl <sub>2</sub> , Mg salts, NaHCO <sub>3</sub> , Phenol red | Cell culture grade                                                          | 1L;10L    |
| D755875                 | DMEM/F-12                                | [Core Parameter] 1:1 mixed basal system, liquid<br>Contains: Glutamax, 15mM HEPES, Sodium bicarbonate<br>Does not contain: None                                                          | Sterile filtered, cell culture grade                                        | 500mL     |
| D1372063                | DMEM/F-12 Medium                         | [Core Parameter] 1:1 mixed basal system, D-glucose 3150mg/L<br>Contains: L-Glutamine, HEPES, Sodium bicarbonate<br>Does not contain: Phenol red                                          | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| <b>RPMI 1640 Series</b> |                                          |                                                                                                                                                                                          |                                                                             |           |
| D1372066                | RPMI 1640 Medium                         | [Core Parameter] Standard, D-glucose 2000mg/L<br>Contains: Glutamax, HEPES, Phenol red<br>Does not contain: L-Glutamine, Sodium pyruvate                                                 | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| D1372068                | RPMI 1640 Medium                         | [Core Parameter] Standard, D-glucose 2000mg/L<br>Contains: Glutamax, Phenol red<br>Does not contain: Sodium pyruvate, HEPES                                                              | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| R1370046                | RPMI 1640 Medium, no Glucose             | [Core Parameter] Glucose-free, D-glucose 0mg/L<br>Contains: L-Glutamine, Phenol red, Sodium bicarbonate<br>Does not contain: D-glucose, HEPES                                            | Sterile filtered, BioReagent, cell culture grade, 1 ×                       | 500mL     |
| R1372062                | RPMI 1640, with HEPES                    | [Core Parameter] Standard, D-glucose 2000mg/L<br>Contains: L-Glutamine, HEPES, Phenol red, Sodium bicarbonate<br>Does not contain: None                                                  | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| R1372073                | RPMI 1640 Medium, no L-Glutamine         | [Core Parameter] Standard, D-glucose 2000mg/L<br>Contains: Phenol red<br>Does not contain: L-Glutamine, Sodium pyruvate, HEPES                                                           | Sterile filtered, BioReagent, endotoxin tested, cell culture grade          | 500mL     |
| R1372076                | RPMI 1640 Medium (ATCC modification)     | [Core Parameter] High glucose modified, D-glucose 4500mg/L<br>Contains: L-Glutamine, Sodium pyruvate, HEPES, Phenol red<br>Does not contain: None                                        | Sterile filtered, BioReagent, endotoxin tested, cell culture grade, sterile | 500mL     |
| R476169                 | RPMI-1640 (without L-glutamine)          | [Core Parameter] Standard, D-glucose 2000mg/L, 1 × liquid<br>Contains: Sodium bicarbonate, Phenol red<br>Does not contain: L-Glutamine, HEPES                                            | 1 ×, cell culture grade                                                     | 500mL     |
| R778408                 | RPMI-1640 Medium (1 ×)                   | [Core Parameter] Standard, D-glucose 2000mg/L, 1 × liquid<br>Contains: L-Glutamine, Phenol red<br>Does not contain: Sodium pyruvate, HEPES                                               | Sterile filtered, BioReagent, cell culture grade                            | 500mL     |

| <b>MEM Series</b>                     |                                                             |                                                                                                                                                                                                                         |                                                                    |              |
| M755909                               | MEM                                                         | [Core Parameter] Earle's salts basal system<br>Contains: Glutamax, Sodium bicarbonate<br>Does not contain: None                                                                                                         | Sterile filtered, cell culture grade, liquid                       | 500mL        |
| M1370041                              | MEM Medium                                                  | [Core Parameter] Standard, D-glucose 1000mg/L<br>Contains: L-Glutamine, Phenol red, Sodium bicarbonate<br>Does not contain: None                                                                                        | Sterile filtered, BioReagent, cell culture grade, 1 ×              | 500mL        |
| M1370044                              | MEM α Medium                                                | [Core Parameter] α-modified, D-glucose 1000mg/L<br>Contains: L-Glutamine, Nucleosides, Phenol red<br>Does not contain: None                                                                                             | Sterile filtered, BioReagent, cell culture grade, 1 ×              | 500mL        |
| M755917                               | MEM, Alpha Modification                                     | [Core Parameter] α-modified<br>Contains: Glutamax, Ribonucleosides/ Deoxyribonucleosides, Sodium bicarbonate<br>Does not contain: None                                                                                  | Sterile filtered, cell culture grade, liquid                       | 500mL        |
| O778393                               | Optimal-MEM Reduced Serum Medium (with Phenol Red)          | [Core Parameter] Reduced serum specialized modified system<br>Contains: L-Glutamine, HEPES, Sodium pyruvate, Phenol red, Insulin, Transferrin, Trace elements<br>Does not contain: None                                 | Sterile filtered, bio-performance grade, cell culture grade, 1 ×   | 500mL        |
| O778394                               | Optimal-MEM (1 ×) Reduced Serum Medium (without Phenol Red) | [Core Parameter] Reduced serum specialized modified system<br>Contains: L-Glutamine, HEPES, Sodium pyruvate, Insulin, Transferrin, Trace elements<br>Does not contain: Phenol red                                       | Sterile filtered, BioReagent, cell culture grade, 1 ×              | 500mL        |
| <b>IMDM Series</b>                    |                                                             |                                                                                                                                                                                                                         |                                                                    |              |
| I755863                               | IMDM                                                        | [Core Parameter] High nutrition basal system<br>Contains: Glutamax, Sodium bicarbonate<br>Does not contain: None                                                                                                        | Sterile filtered, cell culture grade, liquid                       | 500mL        |
| D1372069                              | IMDM Medium                                                 | [Core Parameter] High nutrition, D-glucose 4500mg/ L<br>Contains: L-Glutamine, HEPES, Phenol red, Sodium bicarbonate<br>Does not contain: None                                                                          | Sterile filtered, BioReagent, endotoxin tested, cell culture grade | 500mL        |
| I477254                               | Iscove' s Modified Dulbecco' s Medium                       | [Core Parameter] High nutrition, powder<br>Contains: L-Glutamine, 25mM HEPES<br>Does not contain: Sodium bicarbonate                                                                                                    | Cell culture grade, powder                                         | 1L;10L       |
| <b>Ham's F-12 Series</b>              |                                                             |                                                                                                                                                                                                                         |                                                                    |              |
| N477252                               | Nutrient Mixture F-12 Ham                                   | [Core Parameter] Standard basal system, powder<br>Contains: L-Glutamine<br>Does not contain: Sodium bicarbonate                                                                                                         | Cell culture grade, powder                                         | 1L;10L       |
| N475469                               | Nutrient Mixture F-12 Ham, Kaighn's Modification            | [Core Parameter] Kaighn' s modified, powder<br>Contains: L-Glutamine<br>Does not contain: Sodium bicarbonate                                                                                                            | Cell culture grade, powder                                         | 1L;10L       |
| D1372059                              | Ham's F-12 Nutrient Mixture                                 | [Core Parameter] Standard basal system<br>Contains: L-Glutamine, Sodium pyruvate 110mg/L, Phenol red<br>Does not contain: HEPES, Pen-Strep                                                                              | Sterile filtered, BioReagent, endotoxin tested, cell culture grade | 500mL        |
| <b>Insect Cell Basal Media Series</b> |                                                             |                                                                                                                                                                                                                         |                                                                    |              |
| G778238                               | Grace's Insect Medium, Unsupplemented                       | [Core Parameter] Insect cell-specific basal medium, liquid<br>Contains: L-Glutamine, Sodium bicarbonate<br>Does not contain: Phenol red, Lactalbumin hydrolysate, Yeast extract, Methionine<br>For: Insect cell culture | Sterile filtered, BioReagent, cell culture grade, for insect cells | 100mL; 500mL |
